

Cost Neutral Innovations at Work in This Economy

The iSaaS Document Management model enables companies to address regulatory challenges while delivering productivity gains.

Faced with the fiscal restraints of a weak economy, your company may have shelved plans to institute your digital corporate compliance/records management system.

And, you understand the logic as the company must find ways to trim the operating budget, reduce personnel costs, and seek out new business.

However, legal exposure and regulatory challenges continue to grow, increasing your legal exposure. And you probably already know that an innovative approach to managing and delivering content to your business units and customers will have a significant positive impact on productivity, process improvement, and customer service.

If you find yourself in this position, Image API's iSaaS model (powered by iCenter), provides the answer. First, this model delivers the latest edition iCenter Enterprise Content Management software application configured with our Start Specific, Scale Specific methodology. This means we deliver only the functionality you need to effectively get started yet easily add the additional functionality your organization requires as your requirements evolve.

Second, we wrap all our implementation services into a single delivery model that enables us to deliver in days or weeks as opposed to months (meaning you gain the

benefits of the solution much sooner). Finally, we structure our purchase agreements in such a way that your monthly investment will be far less than the savings generated from improved productivity.

Obtaining our proven Document Management solution with a ***Cost Neutral*** spend will give you the compliance/record retention umbrella you need to safeguard your company's legal position while using the productivity gains on the business side to generate the hard dollar savings necessary to gain approval for the purchase. The iSaaS solution will enable you to redesign your most labor intensive document management chores into powerful, efficient streamlined digital processes that deliver superior service with less staff. Record retention, backup, and secure access are assured when you move your information and support documents to digital images and safely store them in the iCenter repository.

Cost Neutral innovation is a must today and Image API's iSaaS solution is ready for you to review and determine for yourself how it will enable you to protect the company and gain the process improvements required.
